Getting Started

Puzzle Complete

The Puzzle is made of 3 upright pegs and 5 counters of different sizes

At the start of the game the counters are set on one of the outer pegs, largest at the bottom, smallest at the top, forming a tower.

Objective: To rebuild the tower on the other outer peg.

Rules:

Only one move at a time.

A move is when you take a counter off one peg and place it on an adjacent peg.

Only the top counter on any peg can be moved.

At no time must a larger counter sit on top of a smaller counter.

A counter may be moved any number of times forward or backwards across the pegs.
